

Directions for using URI-CIDE with Hydro Sprayer

To achieve maximum results, the URI-CIDE concentrate must be mixed with water when applying to a soiled or stained area.

Step 1: Attach garden hose to the included Hydro Sprayer and attach 32 oz. of concentrate to the Hydro Sprayer.

Step 2: Turn the dial to the “On” position and the liquid will start to dispense.

Step 3: Thoroughly apply mixture to the contaminated area.

A 32 oz. bottle of URI-CIDE will treat approximately 1,000 square feet.

Do it every 14 days or when the turf starts to smell.

Apply it after sunset only.

Wash the turf the following morning with water only.

Note: If sand was used as base underneath the artificial turf or sand or rubber was used as infill, using more URI-CIDE may be necessary.
