Standard"	*ASTM D5823*	*Test Method:*	*Standard Test Method for Tuft Height of Pile Yarn Floorcoverings (Height)*

SAMPLING PLAN:

Sampling Date:	*01/05/2026*

- Specimen sampling is performed in the sampling department at TSI.
- The sampling size of specimens is determined by the test method requirements.
- In the event a specific sampling size is not called for, a determination will be made based on previous testing experience, and approved for use by an authorized manager.
- All samples are subjected to the outside environmental conditions of temperature and relative humidity.
- Sample requiring pre-determined exposure to specified environmental conditions based on a specific test method, take place in the departments in which they are tested

DEVIATION FROM TEST METHOD:

State reason for any Deviation from, Additions to, or Exclusions from Test Method.
None

TEST SCOPE: *A finished synthetic turf identified above, was analyzed for the following construction properties:*

Mass Per Unit Area (Weights): This method determines the mass per unit area of the yarn used to produce the product or pile weight. The total weight includes all components that make up the product. The primary backing weight are the layers that comprise the tufting backing components. The secondary weight is the coating, normally urethane, that provides the backing of the product.
Pile Height: This method determines the length of the individual fiber strands measured from the base of the tuft to the tip of the tuft.
Stitch & Gauge: This method measures the number of binding sites per unit length or width of tufted pile yarn floorcoverings.
Tuft Bind: This method determines the force necessary to pull or break a tuft from it's backing.
Grab Tear: This method determines the tear strength of all of the components that make up the product
